Care Planning Software for Social Care

Executive Summary

Care planning software are digital tools designed to streamline and improve the delivery of care across social care settings. They enable care organisations to assess user needs, create and manage care plans, set goals, and actively involve individuals in planning and reviewing their own care. These software solutions may also support the capture of real-time, auditable records and observations linked to care plans, giving care teams a clear and consistent view of care delivered over time. Additionally, they can support task management, secure role-based access, information sharing with other systems, and reporting that helps providers manage services, maintain continuity of care, and meet regulatory and inspection requirements.

There are a number of care planning software solutions available in the UK, including some that have been assured for use by NHS England. As well as the above core capabilities, some solutions incorporate additional features such as integration with Electronic Medication Administration Records or artificial intelligence capability to assist with note taking and documentation.

Solutions assessed in this report are:

- Access Care Planning
- Access Care and Clinical
- Birdie
- Care Control Systems
- Care Vision
- QCS Care Management Software
- Careberry
- CareLineLive
- Dom Portal by Decaura
- Fusion eCare Solutions Ltd
- Log My Care
- Nourish
- OneTouch
- PASS by everyLIFE
- Person Centred Software
- Qwikify
- RoundSys
- Certa
- CareDocs
- StoriiCare
- OneCare Platform
- Eclipse by Olm
- Cura Systems
- Leecare Platinum 6
- SOS Care Management
- TagCare

This report summarises the capabilities of each care planning software, and assesses them based on criteria provided by Social Care Wales: Welsh Language Capacity; Licensing Cost; Functionality; AI Capability; Data Security; Organisations already using software; Interoperability; Frequency and content of updates to software.
